FERNANDO DA SILVA FELIX

DevSecOps Engineer & Cybersecurity Specialist

Barcelona, Spain · contatofernandorgt@gmail.com · github.com/silvatechf · linkedin.com/in/fernando-silva-83b155a4

SUMMARY

DevSecOps engineer working at the intersection of software development and security operations. Core focus: Python-based automation for authentication telemetry, anomaly detection, and application security scanning. Approaches every system as attack surface until proven otherwise; builds and audits with the same mindset.

CORE SKILLS

Languages & Frameworks: Python, Flask, TypeScript, React

Security Tooling: Nmap, Metasploit, Linux Hardening (Kali)

Infrastructure: Docker, CI/CD pipelines, PostgreSQL

Focus Areas: AppSec/SAST, Detection Engineering, Attack Surface Management

SELECTED PROJECTS

Detection-as-Code Live (DCL)
Active - Authentication Monitoring
Cybersecurity laboratory monitoring Linux authentication events and normalizing telemetry in real time. Python-based pipeline for continuous security analytics.

Triage-Pipeline Microservice
Deployed - Anomaly Detection
Real-time Flask microservice for authentication event triage, evaluating mechanical brute-force patterns via timing variance. Backed by PostgreSQL for event storage.

AppSec-Scanner Platform
In Development - SAST & Code Auditing
Application security scanning platform powered by a custom Python AST engine, with an interactive React frontend for reviewing findings.

Guardian Tool / Auditor
Active - Attack Surface Management
Automation script (auditor.py) for attack surface mapping and identification of exposed configuration files across digital assets.

CERTIFICATIONS & CONTINUING EDUCATION

• Azure AI Fundamentals | Microsoft Certified | 2026

• DevSecOps & Cybersecurity Engineering | Independent Labs | 2026 - In Progress

• Ethical Hacking | Labora Formación | 2026

• Object-Oriented Programming (OOP) | CIEF | 2026
